

surgical gut
assures the surgeon of a precise
balance of characteristics

1
Dependable absorption rate

2
Minimum irritation in tissue

3
Purity of collagen

4
Uniformity of strand diameters

5
Knot strength far in excess of U.S.P. requirements

6
Supple, pliable strands

7
Dry, individual packaging that eliminates the use of hazardous storage solutions

maximum knot
and tensile strength

are assured through the exclusive use of the highest quality raw material, controlled spinning and bonding of suture strands and the uniformity of strand diameters size for size. DAVIS & GECK sutures are produced to meet strength standards that are substantially higher than the standards required by the United States Pharmacopoeia.

dependable absorption
characteristics

and minimum irritation in tissue are assured by purity of collagen, controlled chromicizing, proven methods of dry heat and ethylene oxide sterilization, rigid in vitro and in vivo digestion tests and individual suture packaging. Dry, plastic packaging eliminates the use of hazardous formaldehyde storage solutions.

maximum suppleness

is the result of carefully controlled spinning, finishing and sterilizing processes that assure exceptionally pliable strands that are easier to handle and tie.

54" lengths available
in a new radiopaque
DISPENSER REEL
for faster ligating and
suture preparation

This reel is ready to use, sterile, in the SURGILOPE SP® Suture Strip Pack with a tear-open inner envelope for fast dispensing. A large, legible label on one side immediately identifies the product, which may be viewed through the clear plastic of the other side. The special radiopaque metal eyelet permits smooth withdrawal of the gut, without kinking or catching and prevents damage to the suture material from sharp edges.

available armed with
ATRAUMATIC® NEEDLES

A complete line of surgical gut sutures armed with stronger, sharper ATRAUMATIC needles of the highest quality surgical steel are available. The drilled end feature of ATRAUMATIC needles permits tempering for maximum strength throughout the entire length of the needle and assures the positive locking of needle to suture.

Upjohn

*Highest ratio of
polyunsaturates to saturated fat
of any leading*

MARGARINE

Fleischmann's 100% Corn Oil Margarine (lightly salted) contains almost a full cup of liquid corn oil per pound.

Unlike many margarines which are made from a mixture of oils, Fleischmann's is made only from pure corn oil. More than 80% of the fatty acid content is unsaturated. It provides the highest polyunsaturated to saturated fats ratio (1.7 to 1) of all leading margarines. This unique margarine exceeds the requirements of the Council of Foods and Nutrition of the American Medical Association and of the American Heart Association for an acceptable margarine for use in diets to lower serum cholesterol.

Because it is made from pure corn oil, Fleischmann's has a light, delicate flavor, and always spreads easily. Available at retail grocers across Canada.

Copies of recent medical studies on Corn Oil as a Cholesterol Depressant, and reprints of a report on the Regulations of Dietary Fat by the American Medical Association are available through writing Standard Brands Limited, 550 Sherbrooke Street West, Montreal, P.Q.

SUBSCRIPTION RATES

The Journal is supplied to paid-up members of the Canadian Medical Association as a perquisite of membership. Medical libraries, hospitals, and individuals may subscribe to the Journal at \$15.00 a year, payable in advance. There is a special rate for medical students residing in Canada of \$2.50 a year. Subscriptions and all relative correspondence should be addressed to the Subscription Department, Canadian Medical Association Journal, 150 St. George Street, Toronto 5, Ontario.
